SABRE SAW

MODEL NO: CAT118

PART NO: 3110874

OPERATING & MAINTENANCE INSTRUCTIONS

ORIGINAL INSTRUCTIONS

GC0220 -rev 1

INTRODUCTION

Thank you for purchasing this CLARKE Sabre Saw. The CAT118 sabre saw is a compact and ergonomic tool for cutting steel sheet, reinforced fiberglass, aluminum, wood, etc, according to the blade being used.

Before attempting to use this product, please read this manual thoroughly and follow the instructions carefully. In doing so you will ensure the safety of yourself and that of others around you, and you can look forward to your purchase giving you long and satisfactory service.

Please keep these instructions for future reference.

GUARANTEE

This product is guaranteed against faulty manufacture for a period of 12 months from the date of purchase. Please keep your receipt which will be required as proof of purchase.

This guarantee is invalid if the product is found to have been abused or tampered with in any way, or not used for the purpose for which it was intended.

Faulty goods should be returned to their place of purchase, no product can be returned to us without prior permission.

This guarantee does not effect your statutory rights.

GENERAL SAFETY RULES

CAUTION: FAILURE TO FOLLOW THESE PRECAUTIONS COULD RESULT IN PERSONAL INJURY, AND/OR DAMAGE TO PROPERTY.

WORK ENVIRONMENT

1. Keep the work area clean and tidy.
2. Dress appropriately: - do not wear loose clothing or jewellery. Tie long hair out of the way.
3. Keep children and visitors away - do not let children handle the drill.
4. Do not operate the saw where there are flammable liquids or gases.
5. Stay alert and use common sense - do not operate the saw when you are tired or under the influence of alcohol, drugs or medication.
6. Always wear eye protectors when using the saw - Eye protection must provide protection from flying particles from the front and the side.
7. Always wear ear protectors and face mask when using the saw.
8. Do not overreach - Keep proper footing and balance at all times.

USE OF AIR POWERED TOOLS

1. Never use any type of bottled gas as a source of power for an air tool.
2. Do not connect the air supply hose with your finger on the trigger.
3. Do not exceed the maximum pressure for the saw 90 psi / 6.2 bar.
4. Check hoses for leaks or worn condition before use and ensure that all connections are secure.
5. Keep the air supply hose away from heat, oil and sharp edges.
6. Do not use this saw for any other purpose than that described in this manual.
7. Do not fit this saw to any stand or clamping device that may damage it.
8. Do not carry out any alterations or modifications to this saw.
9. Always disconnect from the air supply when:
 - Performing any maintenance
 - The saw is not in use.
 - The saw will be left unattended.

- Moving to another work area.
 - Passing the saw to another person.
10. Never use the saw if it is defective or operating abnormally.
 11. Always ensure the saw has stopped before putting it down.
 12. The saw should be repaired if required by qualified service personnel.
 13. Avoid damaging the saw for example by applying excessive force.
 14. ALWAYS maintain the saw with care. Keep it clean for the best and safest performance.
 15. Quick change couplings should not be located at the air tool. They add weight and could fail due to vibration.
 16. Do not force or misuse the saw. It will do a better and safer job at the rate for which it was designed.
 17. Do not remove any labels. Damaged labels should be replaced.
 18. This saw vibrates with use. Vibration may be harmful to your hands or arms. Stop using the saw if discomfort, a tingling feeling or pain occurs. Seek medical advice before resuming use.
 19. Never carry the saw by the air hose.
 20. Never carry the saw with your finger on the trigger.

COMPRESSED AIR REQUIREMENTS

WARNING: COMPRESSED AIR CAN BE DANGEROUS. ENSURE THAT YOU ARE FAMILIAR WITH ALL PRECAUTIONS RELATING TO THE USE OF COMPRESSORS AND A COMPRESSED AIR SUPPLY.

- Use only clean, dry, regulated compressed air as a power source.
- Air compressors used with the tool must comply with the appropriate European Community Safety Directives.
- A build-up of moisture or oil in the air compressor will accelerate wear and corrosion in the tool. Ensure any moisture is drained from the compressor daily and the inlet filter is kept clean.
- If an unusually long air hose is required, (over 8 metres), the line pressure or the hose inside diameter may need to be increased.
- The air hose must be rated at least 150% of the maximum operating pressure of the tool.

- A typical air line layout is shown above. If an automatic in-line filter/regulator is used, it will keep the air tool in good condition, but should be regularly checked and topped up with oil. SAE 10 oil should be used and the lubricator adjusted to approx 2 drops per minute.
- The minimum hose diameter should be 5/16" (8mm) ID and fittings should have the same internal dimensions.

- Never exceed the maximum operating pressure for the air tool. It is recommended that air pressure to this tool does not exceed 90 psi (6.2 bar) at the tool when running. Higher pressures and unclean air will shorten the life of the tool due to faster wear and is a possible safety hazard.

BEFORE USE

WARNING: MAKE SURE THAT THE SAW IS DISCONNECTED FROM THE AIR SUPPLY BEFORE INSTALLING, REMOVING OR REPLACING THE BLADE.

FITTING THE BLADE

1. Slide the blade into the saw as shown.

2. Secure the blade by tightening the grub screw shown using the hexagonal key supplied.
3. Identify the material and then select the correct blade for your operation.
4. Always use the correct saw blade for the material for smooth and fast cutting.

- It is recommended that operators use 32T blades for cutting light sheet metal, body panels, exhaust pipes, etc., use 24T blades for general purpose sawing including aluminum and other soft materials, and use 18T blades for cutting plastic, reinforced fiberglass, wood, etc.

CONNECTING THE AIR LINE

1. Remove the protective plug from the air inlet and connect a suitable hose as shown.
2. A gauze filter is fitted within the air inlet. Ensure this is always in place and is kept clean. The air line is connected to the adapter, preferably via a quick release coupling (not supplied).
3. Connect the other end of the hose to the compressed air supply.
4. Ensure the trigger is NOT depressed when connecting the air line.
5. Turn on the air supply and check for air leaks. Rectify any found before proceeding.
 - PTFE tape may be useful for sealing threaded connections.
6. If required, connect an in-line mini oiler to the airline close to the air tool.
 - A mini oiler helps to prolong the life of any air tool.
7. If a mini-oiler is not being used, run a few drops of oil through the air tool before use. It can be entered through the airline inlet or via the hose at the nearest connection to the air supply.
 - Your sabre saw is now ready for use
 - You can fit a whip hose with a quick fit coupling if required (available from your Clarke dealer.)

USEFUL AIRLINE ITEMS FROM THE CLARKE RANGE

CAT150 Mini-Oiler:- Part No 3120164

8mm Rubber Whip Hose:-Part No 3120104

CAT58 6mm Recoil Hose with 1/4" bsp connectors (25 feet):-Part No 3110458

CAT59 6mm Recoil Hose with 1/4" bsp connectors (50 feet):-Part No 3110459

CRH9 9metres professional recoil hose:-Part No 3120100

CAR20PC Manual Air Hose Reel:-Part No 3126250

CAR15PC PVC hose in moulded case with auto re-wind:-Part No 3126000

See the latest catalogue for details of snap couplings & pressure gauges

OPERATION

OPERATING THE SAW

1. Slide the safety lock forward and squeeze the trigger.
 - Allow the saw to reach full speed before use.
2. Release the trigger to stop the saw. When the blade has stopped remove it from the workpiece.

DISCONNECTING THE AIR SUPPLY

1. Do not disconnect the air supply hose until the air supply has been shut down and the compressed air released from the hose.
2. Refer to the compressor instruction manual for the procedure to shut down and release the compressed air.
3. Once the pressure has been released, disconnect the air supply hose from the saw.

MAINTENANCE

WARNING: MAKE SURE THAT THE SAW IS DISCONNECTED FROM THE AIR SUPPLY BEFORE STARTING ANY CLEANING OR MAINTENANCE PROCEDURES.

Please note that factors other than the tools condition may effect its operation and efficiency, such as reduced compressor output, excessive drain on the airline, moisture or restrictions in the air-line, or the use of connector

DAILY

1. Before use, drain water from the air-line and compressor.
2. Lubricate the saw daily for optimum performance. Use a high quality airline oil either via a lubricator in the air supply system or by placing a few drops into the air inlet immediately before use. This should be carried out regardless of whether or not an in-line lubricator is used.

CLEANING & OVERHAUL

1. Keep the saw clean and free from debris.
2. If the saw becomes sluggish and the air supply is of good quality, it may be necessary to replace worn or damaged parts.
3. Grit or gum deposits in the mechanism may eventually reduce efficiency. This condition can be corrected by cleaning the air inlet filter and flushing out the saw with gum solvent oil or an equal mixture of SAE No10 oil and paraffin.
4. Failing this, the saw should be disassembled, thoroughly cleaned, dried and reassembled. You may prefer to take the saw to your CLARKE dealer if internal maintenance is required.

STORAGE

If the saw is to be stored or is idle for longer than 24 hours, run a few drops of Clarke air-line oil into the air inlet and depress the trigger in order to lubricate the internal parts.

When not in use, the saw should be disconnected from the air supply and stored in a dry place out of the reach of children. Avoid storing in a damp environment.

ACCESSORIES

A wide range of accessories is available including filter/regulators, lubricators, high-pressure hoses (5 to 50 metres) etc.

Contact your CLARKE dealer for further information or CLARKE International Service Department on 01992 565333.

Clarke Air Line Oil (part no. 3050825) is available from your CLARKE dealer

Replacement blades are available as follows:

Part no. 3110429

TROUBLESHOOTING

SYMPTOM	PROBLEM	SOLUTION
Tool runs at normal speed but slows down under any load.	<ol style="list-style-type: none"> 1. Excessive pressure on drill. 2. Motor parts worn. 3. Worn or sticking mechanism due to lack of lubricant. 	<ol style="list-style-type: none"> 1. Reduce the force applied to the drill. 2. Return to Clarke dealer for repair. 3. Drip air tool lubricating oil into air inlet. Allow oil to soak moving parts before using.
Tool runs slowly. Air flows weakly from exhaust.	<ol style="list-style-type: none"> 1. Motor parts jammed with gum/dirt. 2. Regulator in closed position. 3. General airflow blocked by dirt. 	<ol style="list-style-type: none"> 1. Examine inlet air filter for cleanliness. 2. Adjust regulator to open position. 3. Operate tool in short bursts.
Tool will not run. Air flows freely from exhaust.	<ol style="list-style-type: none"> 1. Motor vanes stuck due to buildup of foreign material. 	<ol style="list-style-type: none"> 1. Disconnect air supply and rotate tool assembly manually. 2. Try operating tool in short bursts. 3. Tap motor housing gently with a rubber mallet. 4. Drip a few drops of air tool lubricating oil into air inlet to soak moving parts.
Tool will not shut off.	<ol style="list-style-type: none"> 1. O-rings damaged or ill-fitting in seat. 	<ol style="list-style-type: none"> 1. Return to Clarke dealer for repair.

SPECIFICATION

Model Numbers	CAT118
Part Number	3110874
Recommended Hose Size (ID)	10 mm (3/8")
Air Inlet Size	1/4" bsp female
Max Operating Pressure	90 psi (6.2 bar)
Air Consumption (Average)	6 cfm (169 l/min)
Max Speed	5000 strokes/min @ 90psi
Sound Pressure Level (LpA dB)	82.9 dB(A)
Sound Power Level (LwA dB)	93.9 dB(A)
Vibration Levels	3.5 m/s ²
Vibration Uncertainty K:	0.63 m/s ²
Weight	0.95 kg
Dimensions (LxWxH)	255 x 41 x 81 mm

Please note that the details and specifications contained herein are correct at the time of going to print. However CLARKE International reserve the right to change specifications at any time without prior notice.

A SELECTION FROM THE VAST RANGE OF

Clarke®

QUALITY PRODUCTS

AIR COMPRESSORS

From DIY to industrial, Plus air tools, spray guns and accessories.

GENERATORS

Prime duty or emergency standby for business, home and leisure.

POWER WASHERS

Hot and cold, electric and engine driven - we have what you need

WELDERS

Mig, Arc, Tig and Spot. From DIY to auto/industrial.

METALWORKING

Drills, grinders and saws for DIY and professional use.

WOODWORKING

Saws, sanders, lathes, mortisers and dust extraction.

HYDRAULICS

Cranes, body repair kits, transmission jacks for all types of workshop use.

WATER PUMPS

Submersible, electric and engine driven for DIY, agriculture and industry.

POWERTOOLS

Angle grinders, cordless drill sets, saws and sanders.

STARTERS/CHARGERS

All sizes for car and commercial use.
