## OPERATING THE TORQUE WRENCH

## TORQUE SETTING ADJUSTMENT

The main body is marked in both Newton/Metres ( $\mathrm{N} / \mathrm{m}$ ), and Metre Kilograms (Mkg). The barrel is marked with 13 graduations, one graduation $=1 \mathrm{~N} / \mathrm{m}$ or 0.14 Mkg .

Example: To set the torque to $90 \mathrm{~N} / \mathrm{m}$

1. Ensure the lock nut is loosened, by turning it anti-clockwise. Turn the knurled handle until the zero mark on the vertical scale is in line with the 84 mark on the horizontal scale.
2. Continue to turn the knurled handle until the 6 mark is in line with the centre line.
3. Tighten the lock nut to secure the setting.

## METHOD OF USE

NOTE: Preferably, DO NOT use knuckle or universal joints, as these could result in incorrect torque settings.

1. Place the square drive on to the socket or extension bar, perpendicular to the nut/bolt to be tightened.
2. Gripping the knurled handle with the right hand, whilst steadying the $1 / 2^{\prime \prime}$ square drive end with the left, gently but firmly, pull the handle (i.e. in a clockwise direction) until a click is heard, and a slight 'break' in the handle is felt. DO NOT turn any further.

- Apply even pressure throughout the operation. DO NOT jerk the torque wrench when tightening a nut or bolt. This is a precise measuring instrument and should be treated as such.
- Release the wrench immediately the click is heard/felt.
- Note that the 'click' becomes weaker with the lower torque settings.

## CARE \& MAINTENANCE

Each torque wrench has been lubricated before leaving the factory. If the wrench has not been used for some time, operate it several times allowing the lubricant to re-coat the internal working parts.

- After use, keep adjustment at lowest torque setting.
- DO NOT turn handle below lowest torque setting.
- Clean wrench by wiping. Never immerse in any type of cleaning fluid.
- The wrench may occasionally require servicing/recalibration in order to ensure accurate readings, in which case, contact your CLARKE dealer.
